

Enterprise Faceless Video Generator Guide

Overview

This guide describes a zero-recurring-cost local workflow for creating professional faceless YouTube videos using manual research inputs and local generation tools.

Workflow

Trending Topic → Research → Fact Check → Script → scenes.json → image_prompts.txt → thumbnail_prompt.txt → seo.json → Background Music → Create Project → Upload Inputs → Generate Images (ComfyUI + FLUX Dev) → Generate Thumbnail → Piper Voice → Whisper Subtitles → MoviePy + FFmpeg Render → QA → Upload.

Required Inputs

script.md, scenes.json, image_prompts.txt, thumbnail_prompt.txt, seo.json, bg_music.mp3

Project Structure

projects/, outputs/, logs/, config/, frontend/, backend/, database/, docs/, tests/.

Local Models

ComfyUI + FLUX Dev for images, Piper for TTS, Whisper for subtitles, FFmpeg and MoviePy for rendering.

Hardware

RTX 5060 Ti 16GB, Ryzen 7, 64GB RAM is well suited for high-quality 1080p documentary production.

Best Practices

Use fact-checked scripts, maintain consistent prompts, preview outputs, and verify subtitles before publishing.

Quality Checklist

Check title, thumbnail, narration, image relevance, subtitle sync, music levels, transitions, SEO metadata, and final render.

Future Enhancements

Optional image-to-video for hero scenes, asset caching, batch rendering, workflow templates, and timeline editor.
